

LICHEN PLANUS 3

EROSIVE LP WITH SCARRING

Erosive LP is also known as mucosal LP which may be a better term as erosive LP is not always erosive. However, there are erosions in this case. There is considerable architectural change with midline fusion and blunting of the labia minora. Topical oestrogen should be considered as there is pallor below the clitoris which is typical of peri or post-menopausal changes.
